This book provides a solid, scientific, research-based background to advance understanding of how animals impact humans. As a resource for both science and non-science majors (including students planning to major in or studying animal science, pre-veterinary medicine, animal behavior, conservation biology, ecotoxicology, epidemiology and evolutionary biology), the book can be used as a text for courses in Animals and Human Society or Animal Science, or as supplemental material for an Introduction to Animal Science. It offers foundational background to those who may have little background in animal agriculture and have focused interest on companion animals and horses. This valuable book brings a lot of recently gathered data on 528 pages

divided into 21 Chapters with 115 tables and 156 figures incorporated into the book. The current book will contribute to the biomedical sciences, particularly regarding historical interactions between animals and humans which is intended for students, researchers, teachers and professionals dealing with animal and human sciences.
