This book is to provide an up-to-date reference guide to the identification, taxonomy, and known biology of apicomplexan intestinal and tissue parasites of carnivores including, but not limited to, geographic distribution, prevalence, sporulation, prepatent and patent periods, site(s) of infection in the definitive and (if known) intermediate hosts, endogenous development, cross-transmission, pathology, phylogeny, and (if known) their treatments. These data will allow easy parasite recognition with a summation of virtually everything now

known about the biology of each parasite species covered. The book is divided into 20 chapters with total of 712 pages. It contains total of 96 figures. This book could be of interest for both lay persons and professionals (veterinarians, wildlife biologist etc.).
